

DEDICATED STORAGE AREA NETWORK (dSAN)

Advanced Storage for Serious Scaling, Capacity & Performance

When it comes to fast, scalable, and large storage needs, dedicated SAN (dSAN) is an ideal fit. It's a smart storage investment for those that need a long-term, customized solution that they won't easily outgrow and need to replace. You'll experience the optimal security, performance and capacity of a dedicated hardware environment.

To help you meet your needs now and in the future, we're able to configure your storage with different drive sizes, access protocols and speeds. Not only that, but both your storage capacity and host connectivity are built to scale with you as well. So, you can start with the resources required for today and scale efficiently over time, without worrying about outgrowing your storage environment in a few months or years.

And when you take the technology and supplement it with our certified SAN engineers and **Fanatical Support**®, you have yourself an all-around solution. You don't have to deal with the complexities and costs that come with building, maintaining and running SAN – because those are our responsibilities.

HIGH-LEVEL COMPARISON OF FIVE dSAN SOLUTIONS

VNX5100	VNX5400	VNX5600	VNX5800	VNX7600

dSAN ENTERPRISE REPLICATION SERVICES AVAILABLE

This service allows you to replicate mission-critical data stored on dSAN devices between Rackspace data centers. Real time data replication and rapid recovery times help you protect your data and can help you recover faster from local disasters, failures or outages. Enterprise Replication Services is supported by your Dedicated Rackspace Storage Team that designs, implements and manages your solution.
